

# FLOWER BOX CARE TIPS

## DO'S:

- Always use quality water for flower watering.
- The best way to water the foam is with a water bottle with a small mouth. Glasses or jugs often spill down the sides of the cardboard and will ruin your pretty box!
- Add roughly 100 ml of water once daily by pouring it down the middle of your box into the flower's base. Don't worry about getting your box wet. As long as you do it gently, the water will seep into the sponge placed at the bottom of every box.
- Always Display flowers in a cool spot (65-72 F, 18-22 C)
- Remove any flowers or petals that, with time, look less than pristine, as this will keep the remaining flowers looking fresh and also avoid the spread of bacteria to the other flowers.

## DON'TS:

- Never place your flowers with or near fresh fruit or cigarette smoke as both produce ethylene gas, which will shorten flower life.
- Never place flowers in direct sunlight, near a heat register, or near any other source of excessive heat.
